The ASL Side Lighting System by Lunasee

The ASL 1000 Side Lighting System is more than a remarkable safety feature, it is also a unique and aesthetically pleasing addition to any motorcycle. The system easily integrates into the bike—with no lights, wires, or batteries on the wheels. It is weightless and virtually invisible in daylight yet uniquely visible at night.

The patented Lunasee Active Side Lighting system uses a specially formulated LERTape (Light Emitting Rim) that's applied directly to your wheel's rim.

As the wheels rotate, the LERTape is constantly excited by four discrete high intensity LEDpods mounted on the frame or forks of your motorcycle and targeted at the LERTape. The glowing LERTape creates the visible and striking rings of light without any wires or lights actually on or in your wheels.

The Lunasee ASL 1000 significantly improves low-light driving safety by creating an easily recognizable and identifiable light signature which identifies you as a motorcyclist to other vehicles—even if their lights are not shining on you!

ASL 1000—Active Wheel Lighting Kit: \$149.95 (one wheel), \$199.95 (two wheels); 252.353.4354, www.lunasee.com

Cycle Wipes—A Riding Essential

Have you tried everything to clean bugs and grime off helmets, visors, motorcycle shields, lights, and your bike? Soap and water works great but the worst bug attacks seem to know just when to strike—in the middle of nowhere. And don't even think about wiping your glove across that bug splat!

Cycle Wipes are made with a special non-woven "Dirt-Grabbing Mesh Fabric"—a fancy way to say they are soft, gentle, durable, and a lot safer than that old rag or paper towel. Our formula contains no harmful ammonia and is specifically formulated for motorcycle use as an all-purpose cleaner for plastic surfaces, especially motorcycle visors and faceshields. Of course they also work great to clean up other bug-blasted areas of your motorcycle, like headlights, turn signals, and auxiliary lighting.

Cycle Wipes are pre-moistened and pre-folded in a re-sealable package, which means that you have multiple sides to use for cleaning. One wet wipe will typically clean your helmet's visor or faceshield, then when re-folded, will clean your headlight and turn signals. Now you can see and be seen!

Cycle Wipes—\$6.95/12 pack; www.cyclewipes.com
